DETAILED ACTION

Claims 1-9, 15-17, 19, 20, 22, 24, 25, and 27-29 are pending.

The cancellation of claims 10-14, 18, 21, 23, 26, and 30-32 and the amendment to claims 3, 5-9, 15, 24 and 27 filed on 10/8/04 is acknowledged.

Election/Restrictions

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions, which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-8, drawn to an adenovirus packaging cell line.

Group II, claim 9, drawn to a method of producing adenovirus comprising infecting an adenovirus packaging cell line with non-overlapping E1 deleted adenovirus which expresses DT-A or PEA.

Group III, claims 15, drawn to an adenovirus comprising a nucleic acid encoding DT-A or PEA.

Group IV, claims 16, 17, 19, 20, 22, drawn to a method of killing cancer cells using an adenovirus comprising a nucleic acid encoding DT-A or PEA.

Group V, claims 24 and 25, drawn to a method of producing an immunotoxin comprising DT-A or PEA.

Group VI, claim 27, drawn to an immunotoxin.

Application/Control Number: 10/510,592 Page 3

Art Unit: 1635

Group VII, claims 28 and 29, drawn to a method of making a cell resistant to DT or PEA.

The inventions listed as Groups I-VII do not relate to a single inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical feature for the following reasons:

37 CFR 1.475(b) states:

"An international or a national stage application containing claims to different categories of invention will be considered to have unity of invention if the claims are drawn only to one of the following combinations of categories:

- (1) A product and a process specially adapted for the manufacture of said product; or
- (2) A product and process of use of said product; or
- (3) A product, a process specially adapted for the manufacture of the said product, and a use of the said product; or
- (4) A process and an apparatus or means specifically designed for carrying out the said process; or
- (5) A product, a process specially adapted for the manufacture of the said product, and an apparatus or means specifically designed for carrying out the said process.

37 CFR 1.475(c) states:

"If an application contains claims to more or less than one of the combination of categories of invention set forth in paragraph (b) of this section, unity of invention might not be present."

Application/Control Number: 10/510,592

Art Unit: 1635

37 CFR 1.475(d) also states:

"If multiple products, processes of manufacture or uses are claimed, the first invention of the category first mentioned in the claims of the application and the first recited invention of each other categories related thereto will be considered as the main invention in the claims, see PCT Article 17(3)(a) and 1.476(c)."

Page 4

37 CFR 1.475(e) further states:

"The determination whether a group of inventions is so linked as to form a single general inventive concept shall be made without regard to whether the inventions are claimed in separate claims or as alternative within a single claim."

In view of 37 CFR 1.475 (b), 37 CFR 1.475 (c), 37 CFR 1.475 (d), and 37 CFR 1.475 (e), Group I is considered the main invention to the product first mentioned in the claims, and the first recited invention drawn to other categories related thereto, e.g. a method of making, method of use.

The technical feature linking groups II, III, IV, V, and VII appears to be an adenovirus comprising DT-A or PEA.

However, Schwarzenberger et al. (US 6,461,869) teaches an adenovirus comprising DT-A.

Groups I and VI do not require the adenovirus.

Therefore, the technical feature linking the inventions of groups I-VII does not constitute a special technical feature as defined by PCT Rule 13.2, as it does not define a contribution over the prior art.

Application/Control Number: 10/510,592

Art Unit: 1635

The special technical feature of Group I is considered to be an adenovirus packaging cell line.

The special technical feature of Group II is considered to be a method of producing adenovirus comprising infecting an adenovirus packaging cell line with non-overlapping E1 deleted adenovirus which expresses DT-A or PEA.

The special technical feature of Group III is considered to be an adenovirus comprising a nucleic acid encoding DT-A or PEA.

The special technical feature of Group IV is considered to be a method of killing cancer cells using an adenovirus comprising a nucleic acid encoding DT-A or PEA.

The special technical feature of Group V is considered to be a method of producing an immunotoxin comprising DT-A or PEA.

The special technical feature of Group VI is considered to be an immunotoxin.

The special technical feature of Group VII is considered to be a method of making a cell resistant to DT or PEA.

Accordingly, Groups I-VII are not so linked by the same or a corresponding technical feature as to form a single general inventive concept.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
